

DATASHEET

Sofent Inventory Management System

Sofent Inventory Management System (SIMS) is an application designed for small and medium sized industries. It is meant for industries that need an integrated system for allowing data sharing. User has the option of storing the customer and supplier information. This application can be used On Demand and the software will be hosted for the industry. It is a system that manages daily inventory operations, optimizing business processes.

Product benefits

- Zero IT cost
- No Installations and costly updates
- SIMS can function as a stand alone system
- SIMS can be used within enterprise using LAN connection
- Or it can be implemented as a client server model and accessed over the net
- Secure system
- Minimizes duplication of data and effort

Features

Item Management

New Items can be added. This would include the category, item type, cost, supplier purchasing data and selling price. User can delete any Item. It is possible to export items records displayed on the screen in excel, .csv, .rtf, pdf or .xml formats.

Alert Message

During new item creation a minimum and maximum level can be defined. When this level is hit the alert is triggered. When user clicks the info button the affected items are displayed. Similar alerts are displayed for pending orders.

Purchase Order

New purchase order can be entered; details of the existing order and pending orders can be obtained.

Sales Order

New Sales order can be placed. Details of the existing order and pending orders can be obtained.

Supplier
